## Introduction

Dear Colleague,

On behalf of the Belgian Society of Gastrointestinal Endoscopy board, I have great pleasure in inviting you to our annual meeting 2006 which will be held in a new 2-day format including teleconferencing with live procedures in the endoscopy suite of the Cliniques universitaires Saint-Luc.

With the development of the Japanese « surgical » mucosectomies called endoscopic submucosal dissection (ESD) and the amazing event of transgastric endoscopic and surgical procedures in India and USA, many endoscopists are either sceptic or puzzled how these will impact their clinical practice. In USA, increasing funding to treat obesity with new endoscopic technology will even faster expand the variety of endoscopic tools at our disposal.

We are therefore very proud to present three distinguished experts from Germany, USA and Japan who will perform the live procedures and discuss advanced topics such as techniques of mucosectomies, closure of perforations or fistulas, and transgastric surgery. Focus will be placed on practical tricks to help you in your day-to-day practice.

Since these endoscopic techniques very closely resemble the surgical ones, it seemed the right occasion to invite our surgeon friends to present their latest developments in laparoscopic or endoluminal surgery. We thank them for their collaboration and participation.

Will these innovations oppose endoscopy and surgery or will they impose a new way of thinking, teaching and learning? These questions will be the topic of the Saturday midday conferences and debate.

The meeting is therefore designed for gastroenterologists, surgeons and trainees. Attendees are encouraged to bring their GI nurses to participate.

We are looking forward to seeing you in Brussels.
